

I CLAIM:

1. An adapter for a first flush water diverter, the adapter having a collector for receiving water from a catchment area, a passage from a lower part of the collector through which water may be directed into an attachment portion adapted to couple the adapter to a first flush water diverter and at least one outlet from the collector.
2. The adapter of claim 1 wherein the collector comprises a housing having an inclined base wall and an upstanding cylindrical side wall extending from the base wall with the free end of the side wall forming an open top of the collector.
3. The adapter of claim 2 wherein the passage is provided by a spigot extending from the base wall.
4. The adapter of claim 3 including two said outlets adjacent the passage.
5. The adapter of claim 1 having strengthening ribs extending across an inside face of the base wall.
6. The adapter of any one of claims 1 to 5 in combination with the attachment portion with the attachment portion having an upstanding passage received by the passage extending from the collector.
7. The adapter of claim 6 wherein the attachment portion has an inclined upper wall with the passage of the attachment portion extending from the upper wall thereof.
8. The adapter of claim 7 wherein the attachment portion includes a side wall extending downwardly of the upper wall thereof.

9. The adapter of claim 8 wherein the side wall of the attachment portion is cylindrical.

5 10. The adapter of claim 7 including a brace extending between the base wall of the collector and the upper wall of the attachment portion.

10 11. The adapter of claim 2 including a filter extending across the open end of the collector.

15 12. The adapter of claim 11 including a cover attached to the side wall of the collector to extend over the filter and to close off the open end of the collector.
